PROJECT: GENENGINE ANGULAR APP FOR GENETIC DIAGNOSIS OF RARE DISEASES

First I wrote a suite of E2E UI tests in TestCafe from scratch, in order to increase confidence while making changes. Then I made numerous improvements of UI/UX, performance, robustness, architecture, refactors and I prepared the app for release. Working directly with CEO & CTO. Communication in English and Spanish.

PROJECT: FLEXAGENDA

Android app for time planning (freemium). Reached 100k installs organically; 4.3/5 average rating. I developed the app from scratch in native Android & Java and released many versions based on a lot of user feedback I received. I was also in regular communication with users (paid and gratis) over e-mail, IM and voice chat, helping to solve issues and discussing improvement suggestions. App available in English, Spanish, German, Polish.

PROJECT: TEAMFORGE INTEGRATION WITH GERRIT AND GIT

Worked at the Company that created Subversion (Svn) version control system, somewhat ironically on development of integration of Git and Gerrit with CollabNet's flagship product - TeamForge, an ALM (Application Lifecycle Management) enterprise system, used by big enterprise clients like Intel, Ericsson, NXP. We were also dogfooding using the Gerrit-based code review system which was a great opportunity to also master advanced Git workflows using rebasing, squashing, etc.
